ABOUT US

OVER 200 SUCCESSFUL PROJECTS

OGL offers flexible service and product solutions tailored to each of our customer's specific requirements.

One Global Logistics OGL is a leading international customs, forwarding & logistics enterprise formed in 2010. Construction Logistics is a specialised division of OGL created in Melbourne in 2013, that provides end to end project management of imported façade, joinery, shopfitting and general construction materials where the client requires a single point of contact and a customised, competitive supply to site solution.

- Advisory and Cost Modelling Services (Import Projects)
- Risk Management
- Engineering & Materials Handling Advice.

CONSTRUCTION LOGISTICS SOLUTIONS

OUR EXPERIENCE

OGL’s Construction Logistics team has delivered more than 200 successful projects across Australia, managing complex façade, window wall, curtain wall, joinery and imported construction packages from origin through to site. Our experience spans major residential, commercial, education and health developments, with tailored logistics solutions covering international freight, customs, warehousing, specialist transport, materials handling and coordinated site delivery. This proven capability allows project teams to move high-volume, time-critical materials with greater visibility, control and confidence.

TRANSPORT & TECHNOLOGY

OGL combines specialist transport, materials handling and purpose-built digital technology to manage complex construction logistics from international origin through to final site delivery. One Connect provides real-time visibility across global freight, including shipment tracking, documentation, milestones, notifications and order management, while Field Connect extends that visibility into specialised landside operations. Together, these platforms support inbound container management, façade and material tracking, warehousing, scheduled site deliveries and proof of delivery, giving project teams greater control, accurate information and a connected view of materials throughout the supply chain.

ONE CONNECT

REAL TIME World-Class Technology that seamlessly integrates your shipping data into a user friendly, reliable & accurate platform. Manage and drive your global supply chain, seamlessly integrate with all freight management platforms, and revolutionise your freight management. Our end-to-end solution is the next generation of real-time digital shipping tools.

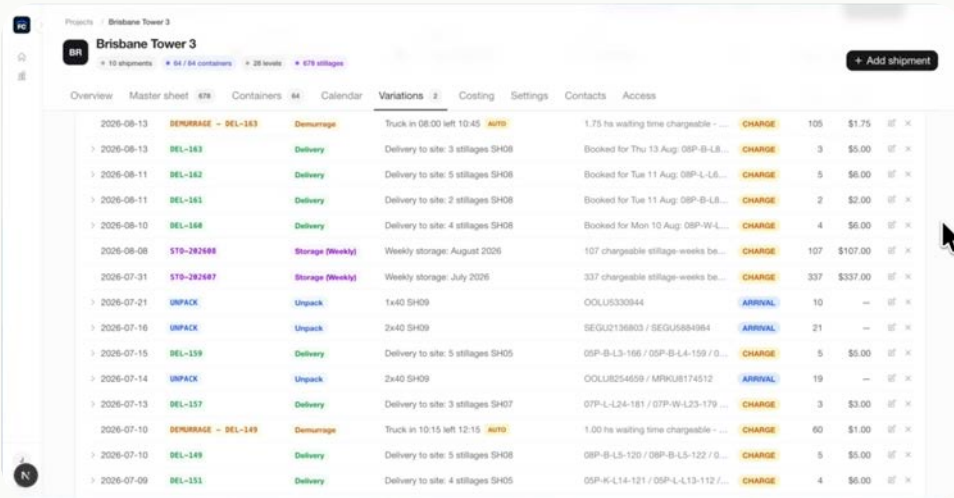

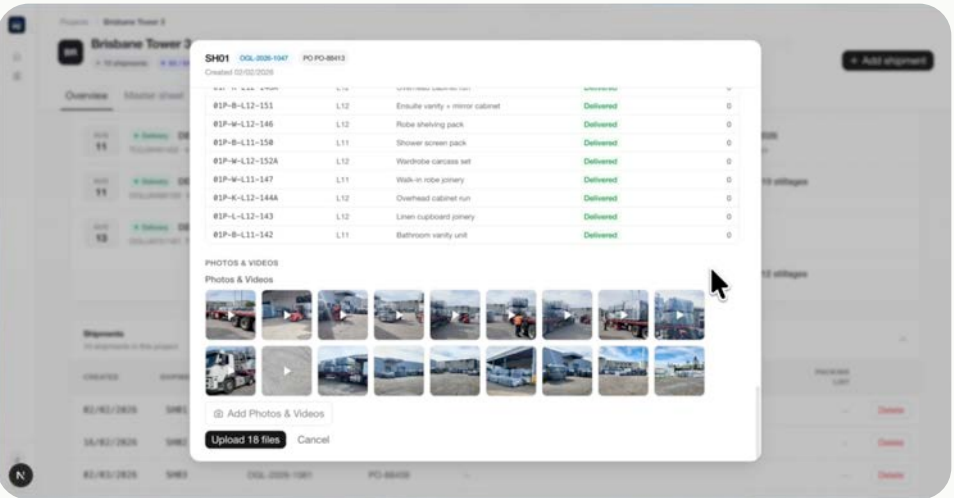

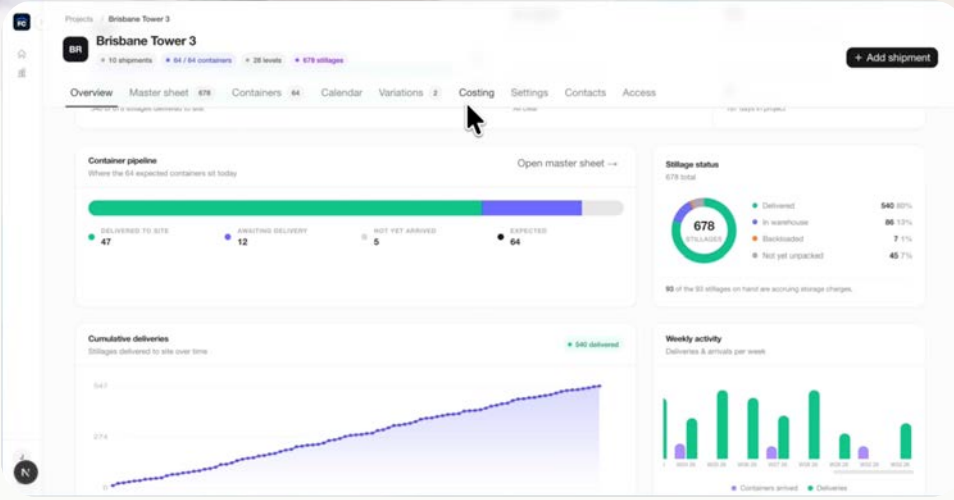

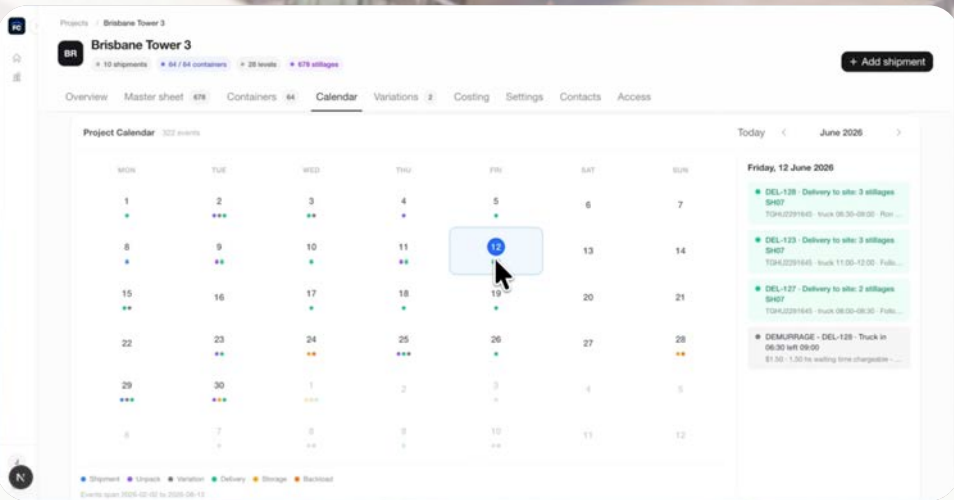

SPECIALISED TRANSPORT

Façades and materials handling

End-to-end project interface, every panel, every location.

Field Connect tracks facade and joinery packages from the packing list to the site, by container, stillage and level, and applies your rate card as each movement is recorded. The costing report is written by the work, not rebuilt at month end.

LANDSIDE LOGISTICS TRACKING

“

Field Connect has been developed from practical logistics requirements identified across active Australian construction projects.

The platform addresses a recurring challenge within imported construction materials logistics: information frequently exists across freight forwarders, shipping lines, customs documentation, warehouses, transport providers and project teams, while the construction team ultimately needs one clear view of what material is arriving, where it is located and when it can reach site. Field Connect brings those logistics stages together.

“ Over 200 successful projects
